Global activity is expected to improve further in 2014–15.

Global growth is projected to strengthen from 3 percent in 2013 to 3.6 percent in 2014 and 3.9 percent in 2015.

Growth rate in *Advanced Economies* is expected to increase to about 2.3 percent in 2014–15, an improvement of about 1 percentage point compared with 2013.

Activity in emerging market economies has remained weak in a less favorable external environment.

Higher financial volatility in late January highlights the challenges for EMEs posed by the changing external environment.
Outline

1. Recent Global Outlook
   - An Overview of the Global Economy
   - Monetary Conditions

2. Economic Models in Saudi Arabia
   - Types of Forecasting Methods
   - SAMA Economic Models

3. Forecasting Outcomes
   - Data Sources/Frequency
   - Results
Monetary Conditions

- Monetary conditions have stayed mostly supportive in advanced economies.
- United States: policy rate is expected to increase in the second half of 2015.
- Euro area and Japan: markets continue to expect a prolonged period of low interest rates and supportive monetary policy.
Monetary Conditions

Monetary conditions have tightened in many emerging market economies, reflecting changes in external funding, but also policy rate increases in some economies (including Brazil, Indonesia, South Africa, and Turkey).

Fact

Despite some retrenchment in capital inflows since the Federal Reserve’s surprise tapering announcement in May 2013, developments to date do not portend a sustained reversal of capital flows.
EMEs Tightening of Monetary Conditions

Monetary Conditions

Monetary conditions have tightened in many emerging market economies, reflecting changes in external funding, but also policy rate increases in some economies (including Brazil, Indonesia, South Africa, and Turkey).

Fact

*Despite some retrenchment in capital inflows since the Federal Reserve’s surprise tapering announcement in May 2013, developments to date do not portend a sustained reversal of capital flows.*

2. Economic Models in Saudi Arabia
   - Types of Forecasting Methods
   - SAMA Economic Models

3. Forecasting Outcomes
   - Data Sources/Frequency
   - Results
Some institutions favor a forecasting approach that is structured explicitly within a model framework. Others place much greater emphasis upon the judgments of sector experts and the experience of policy advisers.
Types of Forecasting Methods

Subjective Approach
(Qualitative in nature and usually based on the opinions of people)

Objective Approach
(Quantitative / Mathematical formulations - statistical forecasting)
### Qualitative Methods.

<table>

Qualitative Methods.

Example
Panel Consensus

Definition
Forecasts are obtained from the synergy of a panel of experts in the area.
Quantitative Methods

Definition

Time-series forecasting is the use of a model to predict future values based on previously observed values.

Model Features

1. Historical data
2. Prior treatment (missing data, outliers, behavioral examinations... etc)
Quantitative Methods

Definition

Time-series forecasting is the use of a model to predict future values based on previously observed values.

Model Features

1. Historical data
2. Prior treatment (missing data, outliers, behavioral examinations... etc)
Time-Series Forecasting

Examples

1. ARIMA Models
2. Structural Models
3. Input-Output Macroeconometric Model
4. State-Space Models
5. DSGE Models
Key issues in forecasting...

- Usually forecasting is based on the assumption that the past predicts the future!
- But history is not always a perfect predictor of the future. Right?

Example

The black swan theory
Key issues in forecasting...

2. Economic Models in Saudi Arabia
   - Types of Forecasting Methods
   - SAMA Economic Models

3. Forecasting Outcomes
   - Data Sources/Frequency
   - Results
Motivation

1. Forecasts are at the heart of policy making.
2. Forecasting is a tool used for predicting future outcomes based on past information.
3. SAMA staff can use forecasts’ outcomes to carry out research in various topics.
SAMA Forecasting Approaches

Qualitative methods
Rely on subjective opinions from one or more experts.

Quantitative methods
Rely on data and analytical techniques.
Our Strategy

**PHASE I**
- Determining our goals and the scope of policy analysis.
- Collecting data
- Specifying sub-goals

**PHASE II**
- Specifying methodologies to carry out our tasks.
- Given data availability, we start applying different tools to carry out specified tasks.

**PHASE III**
- Examining the accuracy and suitability of phase II outcomes
- Qualitative measures kicks in
- Finalize our overall results
Overview of SAMA Economic Models
SAMA’S MACROECONOMETRIC MODEL

- The model is simultaneous and dynamic in nature.
- The main sectors of the economy have been inter-linked via instantaneous (and lagged) feedback mechanism.
- The model solves for the values of all endogenous variables simultaneously.
SAMA’S MACROECONOMETRIC MODEL (cnt.)
The SAMA-MEM contains 81 equations divided into 5 blocks; 31 of them are behavioral and the remaining 50 are identities and definitions; There are 31 exogenous variables; 33 lagged or pre-determined variables making the model reasonably dynamic; Only 4 out of the 81 equations are recursive supporting the premise that the model is highly interlinked or simultaneous in character.

Communications Sector Insights

1. The contribution of communication activity in GDP has increased significantly due to the growth in capital investments, and expansion of communications networks.

2. According to Communications and Information Technology Commission (CITC), the telecommunications sector’s contribution is estimated at about 8% of non-oil GDP and 2.8% of the total GDP.

3. In addition, statistics indicate that increasing the telecommunications services by 10% on average leads to a real growth up to 1.3% of GDP.
Main Forecasting Outcomes

### SAMA’s Forecasts for Macroeconomic Variables in 2014

<table>
